Real time PCR Master Mixes SafeLine EVA

qPCR Master Mixes based on EvaGreen as fluorescent DNA stain and dUTP instead dTTP. Several combinations with ROX and/or UDG are available to protect carry-over contaminations. EvaGreen™ Fluorescent DNA Stain is a superior DNA intercalator dye especially developed for DNA analysis applications including qPCR and high-resolution DNA melting curve analysis (HRM).

All Master Mixes:

- are optimized for high specificity and sensitivity because of optimized reaction buffers
- are easy to use because ready-to-use Master Mix
- have short activation time
